

## KISSsoft. Efficiency.

Stronger. Lighter. Quiet.

Machine Design with  
KISSsoft

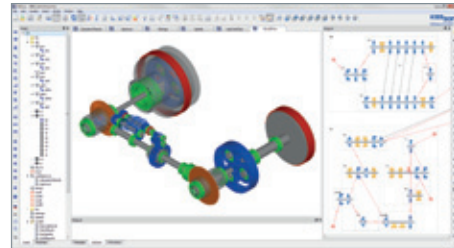

# Efficiency

in the entire  
down to

## Efficient Design Process

Integrate experience and data gathered in tests or FE calculations in the new design.

» Design optimization

## Efficiency in Production

Import of existing cutters, tools or machine parts into KISSsoft & KISSsys calculations.

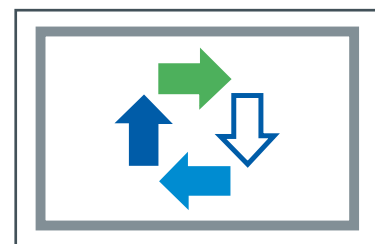

» Reduces costs

## Easy Data Transfer

Data import / export over a wide variety of interfaces to external programs: data exchange with production, customers or partners.

» Efficiently linked

## Efficient Sizing

Covers all machine elements – such as gears, shafts, keys, bearings, screws etc. – enabling rapid initial estimation of service life and strength.

» One program does it all

## Efficient Variant Calculation

Calculates thousands of variants in a matter of minutes, and selects the optimum variant, e.g. to avoid micropitting or noise.

» Optimization tools

## Perfect Documentation

Documentation at the click of a button – in 7 languages.

» No costs for translation

## Cost Efficiency in Purchasing

» Buy what you need.  
Nothing more.

### Software

Developed by mechanical engineers  
for mechanical engineers

Intuitive and based on industry  
practice

Constantly updated to comply with  
new standards

Our developers are involved in  
standards committees and  
workgroups

### Support & Services

#### Hotline

Same day technical support

#### Updates

Compatibility with current hardware  
and software

#### Trainings

Regular, progressive, specialized

#### Engineering services

For special cases

#### Customer-specific software developments

Software extensions to strengthen  
your market position
